

Feature Comparison iTalkX- LE vs iTalkX

iTalkX-LE and iTalkX both provide a graphical list box control that can be placed in your application. The list box is automatically maintained as intercoms connect to and disconnect from the software. Incoming calls from Intercoms generate events that the application can respond to. The control allows you to have a Talk/Listen session with one intercom at a time. The control manages the playing and sending of audio through the PC's multi-media card.

Feature	iTalkX-LE	iTalkX
